

ELECTRODERMAL RESEARCH STUDY

To test the **effectiveness of** EMF Harmony Protection Devices, specifically EMF HARMONIZER MOBILITY+ BRACELET and EMF HARMONIZER+ FOR CELL PHONES AND WIFI ROUTERS on the **STRESS RESPONSE** triggered by Electromagnetic Emissions from a **CELL PHONE**

Study Location: Tampa, Florida

Date: 4/8/20-5/12/20

Medical Researcher: Dr. Elena M. Morreale

Testing Equipment: BioMeridian MSAS Professional (FDA registered and ISO certified)

Testing Device: iPhone 8, iPhone x, flip phone

Study Purpose

To test the weakening and / or compensation of electromagnetic radiation (EMF) from a cell phone on 7 key body (energy) systems when using EMF Harmony technology with the available series of measurements and testing device.

1. Introduction

The suspicion that the **influence of electromagnetic waves** and fields emitted by televisions, radios, microwaves ovens, computers, cell phones, etc. have a **negative, lasting impact on the human health system**, has become - with an increasing number of worldwide studies - a certainty. **Many so-called modern illnesses** of today's civilization (in particular allergies) seem to be released and / or **exaggerated by these electromagnetic influences**.

According to the **ARNDT-SCHULTZ-RULE**, it is the **weak and small doses** that **have particularly strong influences** in their effect on biological systems, releasing clearly measurable reactions. **After an accumulation of negative influences** in the course of months or years, pre-pathological and ultimately **pathological reactions can be observed**, and changes may occur in the human organism.

The rule applied to determine in tests,

a) Whether and which causal influences have a changing effect on humans when exposed to the range of EMF-radiating technologies, and

b) Which substantiating testing methods can be used when evaluating human energy systems, and are they suitable to show the qualitative and quantitative effects of such technical influences (i.e. EMFs).

Many functional or energy medical devices, such as the BioMeridian MSAS Professional testing device used in this study are assessed on the research of Dr. Reinhold Voll. Dr. Voll established that there is a network of energy channels, called meridians, flowing through the body. Meridian points, some of which correlate to acupuncture points, can be used to collect energetic data. Dr. Voll demonstrated that the body's organs are associated with different energy meridians. Imbalances in various organs are believed to manifest themselves as energetic disturbances in the associated meridians. These energetic meridians are also highly responsive to external stressors, almost immediately. This study will take advantage of this fact.

As sufficiently sensitive and reactive measuring points, 7 acupuncture systems with its meridians and points were chosen.

The points chosen were:

- Lymphatic system
- Lung
- Large Intestine
- Nervous System
- Circulation
- Allergy Response
- Cellular Metabolism

These points represent the condition of the entire human energy system and, within seconds, reflect physical reactions to the biophysical attractions (assuming these affect the body in a noticeable manner). Also, the body's compensatory reactions through homeostasis can immediately be measured and evaluated through these points.

2. Material and Methods

The BioMeridian MSAS Professional (an FDA registered and ISO certified device) which measures stress in over 60 different parts of the human body was used as the measuring device. It is currently used by over 2,000 health practitioners in the U.S., Europe, Canada, Australasia and many other parts of the world. This system is an important indicator of resistance to stress in essential bio-systems throughout the body.

In each of the 7 key body areas the test-subjects were measured on a data output scale of 0-100. The ideal target zone falls within the 47-55 score range.

Practitioners say that any measurement above 55 is stressful as it indicates excess energy, or an inflamed condition in that part of the human biofield. Any measurement below 45 is also stressful because lower numbers represent impaired, weakened, or blocked energy systems. The closer an individual's measurements are to 50, the closer he/she is to actually being in his/her ideal performance zone.

The individual screenings show the Meridian changes that took place in relation with exposure to the product being screened. Cell phones (iphone 8, iphones x and flip phone) were used for testing. The phone equipped with the **EMF HARMONIZER+** chip had one chip added to phone, or 2 chips depending on phone as demonstrated. Studies were all run with just adding **EMF HARMONIZER MOBILITY+ BRACELET** to the person while holding the cell phone without **EMF HARMONIZER+**

The following groups of 5 individuals were involved in the test: 3 Woman, 2 Men

The measurement schedule was developed as follows:

Measurement 1 (M1): Standard measurement. Base line (no cell phone).

Measurement 2 (M2): Non Active call without **EMF HARMONIZER Device** applied.

Measurement 3 (M3): Active call without **EMF HARMONIZER Device** applied.

Measurement 4 (M4): Non Active call with **EMF HARMONIZER MOBILITY+ BRACELET** on.

Measurement 5 (M5): Active call with **EMF HARMONIZER MOBILITY+ BRACELET** on.

Measurement 6 (M6): Non Active call with *one* EMF HARMONIZER+ on the phone.

Measurement 7 (M7): Active call with *two* EMF HARMONIZER+ on the phone.

The average test measurements took approximately 5 to 7 minutes so as to negate the element of time compensation.

3. Conclusions

When tested without a cell phone (baseline state), across all individuals tested, 37.1% of their key body areas measured within the ideal performance zone, and 62.9% of the key body areas measured outside of the ideal range.

As a result of our second and third measurements **the influence of EMFs from cell phone resulted in a significant, measurable shift in the energy levels of the human organism** in most acupuncture points. When using a cell phone without the EMF Harmonizer Mobility+ Bracelet or the EMF Harmonizer+ Chip attached to it, across all individuals tested, only 8.6 % of their key areas measured within the ideal performance zone. The remaining 91.4% of their key body areas were in a *weakened* or *stressed* state. This **demonstrates a significant negative effect of shifting the organism out of the healthy standard range.**

As a result of our fourth and fifth measurements **the influence of EMFs from cell phone resulted in a significant, measurable shift in the energy levels of the human organism** in most acupuncture points. After applying the EMF Harmonizer Mobility+ Bracelet while having the phone active or not active, across all individuals tested, 100% of their **key body areas measured within the ideal performance zone.** The remaining 0% both with and without active call of key body areas also showed a *less stressed* state when compared to both the original baseline value and the “phone call without bracelet” measurement. This **demonstrates a significant positive effect of shifting the organism back to healthy standard range.**

As a result of the sixth measurement, **after applying the EMF Harmonizer+ (1 chip) on the phone,** across all individuals tested, 51.4 % of their **key body areas measured within the ideal performance zone.** The remaining 48.6 % of key body areas also showed a *less stressed* state when compared to both the original baseline value and the “phone call without the chip” measurement. This **demonstrates a significant positive effect of shifting the organism back to healthy standard range.**

As the result of the seventh measurement, **after applying the EMF Harmonizer+ (2 chips) on the phone,** across all individuals tested, 100% of their **key body areas measured within the ideal performance zone.** The

remaining 0% both with and without active call of key body areas also showed a *less stressed* state when compared to both the original baseline value and the “phone call without the 2 chips” measurement.

****** Please the see notes at the end of the document for more information on the difference in the results of the fifth, sixth, and seventh measurements.***

SUMMARY

Status	% within Optimum range	% outside Optimum range
Baseline State M1	37.1	62.9
With cell phone by itself (No device added) M2 & M3	8.6	91.4
With cell phone while wearing EMF Harmonizer Mobility+ Bracelet M4 & M5	100	0
Cell Phone with 1 EMF Harmonizer+ chip M6	51.4	48.7
Cell Phone with 2 EMF Harmonizer+ chip M7	100	0

In summary, by comparing seven key areas of the body before and after using the **EMF Harmonizer Mobility+ Bracelet** and the **EMF Harmonizer+ Chips**, screening results showed that numeric stress values for all subjects were restored significantly closer to equilibrium. Each individual showed strengthened resistance to the effects of stress, and a dramatic increase in measurable energy. This in fact demonstrates the positive effect of the EMF Harmonizer Mobility+ Bracelet and the EMF Harmonizer+ Chip.

SAMPLE TEST RESULTS FROM A PATIENT

Test Details:

Name of Test Subject: 2 Test Patient

Date Tested: April 22, 2020

Test Location: Tampa, Florida

Test Equipment used: FDA-registered MSAS Professional

**Credentials of Test Administrator: Doctor of Chiropractic Medicine,
23 years' experience with performing MSAS**

Below is an image of the testing environment. Note the cell phone resting on the patient's leg, which was the standard protocol for the testing.

Test Findings:

1. Baseline (No Phone):

When tested without a cell phone (baseline state), 0 of 7 (42.8%) of this individual's key body areas measured within the ideal performance zone.

2. Phone without EMF Harmonizer Mobility+ Bracelet or EMF Harmonizer+ Chip:

When using a cell phone without the EMF Harmonizer Mobility+ Bracelet or EMF Harmonizer+ Chip attached to it, 7 of 7 key body areas (100%) were in a weakened or stressed state.

3. Phone with EMF Harmonizer Mobility+ Bracelet:

After wearing the EMF Harmonizer Mobility+ Bracelet the phone in in use and not in use, all 7 key body areas (100%) showed significant improvement, with 7 of 7 (100%) of them now measuring within the ideal performance zone.

4. Phone with 1 EMF Harmonizer+ Chip:

After applying 1 EMF Harmonizer+ Chip on the phone all 7 key body areas (100%) showed significant improvement with 2 of 7 (28.5%) of them measuring within ideal performance zone. The 3rd, 4th, 5th, 6th and 7th key areas also showed a less weakened state when compared to original baseline value and the "phone use without chip" measurement.

5. Phone with 2 EMF Harmonizer+ Chip:

After applying 2 EMF Harmonizer+ Chip on the phone all 7 key body areas (100%) showed significant improvement with 7 of 7 (100%) of them measuring within ideal performance zone.

Notes from EMF Harmony:

- Dr. Morreale has no affiliation with or financial interest in EMF Harmony.
- You may have noted in the results that one Harmonizer+ chip resulted in bringing 51% of the measured parameters within the optimal state (an increase from 8% without it) and two of them brought them to 100%, whereas the Mobility+ bracelet always brought them to 100%.

The reason for this is that the Mobility+ bracelet is designed to work primarily on supporting the body and secondarily on harmonizing the EMF radiation from the phone, whereas the Harmonizer+ chip is designed primarily to work on harmonizing the EMF radiation emitted by the phone and secondarily on supporting the body.

As a result, the Mobility+ (and the other EMF Harmony wearable devices) will show a significantly shorter reaction time on the body's health measurements. One Harmonizer+ chip (measurement 6) would be expected to show results similar to the Mobility+ bracelet (measurement 4) or to two Harmonizer+ chips (measurement 7) after some time has passed and the patient's body has had time to resonate with the energy on the chip.

The length of time needed for this to happen would depend on the patient's state of health, the frequency with which they use their phone, and other factors. Dr. Morreale did indeed conduct follow up research on this point with several patients and confirmed that after a period of at least two weeks with the Harmonizer+ on their phone the measurement yielded similar results to the Mobility+ bracelet (in other words 100% in the ideal performance zone).
